

Why DevOps?

DevOps enables software development to address customer needs faster, increase speed to market, throughput, and improve operational agility.

DevOps enables

Speed: Ability to release features to market faster.

Throughput: Increase throughput.

Quality: Higher-quality software and applications

Operational Agility: Quickly pivot to address changing customer demands

Innovation: Ability to rapidly test and learn with faster feedback loops

Continuous deployment: Leveraging self-service, automation tools

Rapid iterations on solutions and frequent feedback (*test and learn*) to deliver products weekly (or even daily)

Infrastructure Elasticity: Quickly deploy infrastructure scale up to meet demand, and scale down when no longer needed

Collaboration: Between Development and Operations to achieve common goals

Embracing DevOps enable organizations bring new solutions to market faster

Software Delivery Tooling
